

QA-60 HEAVY BRUSH CUTTER

The Toughest Brush Clearing Device Available Anywhere!

Anything else is just.....WIMPY!!

Unleash the power of your high flow hydraulics on this monster. Until just the past few years this product could not even exist because the auxiliary flow rates and pressures of the machines would not provide enough power to run it.

With the modern machines pushing 40 GPM and 4000 PSI, someone had to produce a product that could harness that power and create a mower that could cut through the heaviest of material.

Well, here it is!

The high flow workhorse of skid steer industry, built to push over small trees and brush, and then mulch them up. This attachment is not for everyone, but if you need a 60" skid steer mower that will handle 38 gpm of hydraulic flow and survive

even the most severe applications look no further.

Used in the harshest conditions like power line easement clearing, hurricane clean-up, lot clearing, heavy field clearing.

Your machine should have a minimum lifting capacity of 2000 lbs. and have a minimum flow rating of 30 GPM.

There are low flow models available, but they do not meet the same specifications. Contact sales for specifics about your low flow machine.

Note: Due to high pressure and rate of flow operation, a case drain must be installed on the skid steer if not equipped by the owner prior to use.

Features:

- T-1 high strength steel construction (no mild steel used).
- Double 1"x 6 5/8" T-1 blade disk with reversible blades.
- Quick-attach standardized skid steer mounting plate.
- Gear type direct drive hydraulic motor & protection valve. Piston Motor option available for over 35 GPM @ 3300 PSI & up.
- High rise front intake bumper, keeps material off cab.
- Flat faced quick couplers, hoses and D ring.
- Polyester powder coat paint finish.
- Hardox® long life skid shoes.
- 30 to 45 gpm (*May require additional motor for higher flow and pressure).
- Will cut up to 8" material.
- Weight - 1500 lbs.
- Cutter Width = 60". Overall Width = 72"
- Capacity = 8"
- Length = 64"
- Weight 1500lbs
